# Installation, Storage & Tools

## Installation

- The "Wakefield Bridge" steel shingles must be installed on roofs with a minimum pitch of 4/12.
- For the best results, Ideal Roofing recommends the removal of the asphalt shingles prior to installing the "Wakefield Bridge". First inspect the deck underneath and replace any damaged decking then apply the underlayment. Consult your local distributor for the choice of the appropriate underlayment.
- For re-roofing over existing asphalt shingles, inspect the deck underneath to ensure a solid base. Correct or remove curled up shingles then apply a synthetic waterproof underlayment before installing the "Wakefield Bridge". This application requires 1 ½" long screws and starter #815.
- For new construction and in climates that experience freezing temperatures and (or) high winds, use waterproof peel and stick membrane on the first 36" from the eave, 12" from the edge of the gable, 36" on each side of the valley, 12" around skylights and chimneys. For the remainder of the roof, use synthetic waterproof underlayment. On roofs with multiple slope variations and dormers, the use of peel and stick membrane on the entire roof surface is highly recommended. Consult your local distributor for the choice of the appropriate underlayment. This application requires the starter #815.

## Storage

- Storage time should be minimized by installing the metal shingles as soon as possible. If shingles must be stored for an extended period, the ideal storage place is under a roof in a cool, dry and well ventilated area.
- When outdoor storage is unavoidable, the following is recommended:
  - 1: Use good quality covers over stacks,
  - 2: Block bundles off the ground,
  - 3: Store away from chemically aggressive substances (e.g. salt, cement, fertilizer, diesel, oil, paint, and grease).

## Required Tools

- Electric screw gun with adjustable torque.
- Tin snips or nibblers.
- Measuring tape.
- Screw (nail) apron.
- Rubber mallet.
- Locking sheet metal pliers ("Vice Grip" type).
- Folding tool.

# Safety, Maintenance & Tips

## Safety

- Working gloves.
- Proper eye protection.
- Hard hat.
- Rubber-soled shoes (Steel roofing can be slippery when wet or icy).
- Properly secure material on the roof.
- Safety harness.
- Knee pads.
- Avoid installing on a windy day.
- Avoid having loose materials and tools on the roof.
- Avoid walking on the locks/seams of the shingles.
- Secure area below work.
- Use proper attachment for fall protection.

## Maintenance

- When walking on the roof, avoid stepping on the interlocks of the steel shingles.
- To avoid scratching the paint on the "Wakefield Bridge" Steel Shingles, make sure to clean up the bottom of your rubber-soled shoes from any stones or debris before stepping on the roof
- Inspect and remove any debris (leaves, nails,...) on an annual basis

## Touch Up Paint

- In the event of minor scratches, the installer should use a fine detail brush to cover only the scratch using minimum amount of paint. For multiple scratches or major paint damage, replace immediately the affected panels. **Note:** The shine of the touch up paint might have a slight difference from the original pre painted steel.

## Important Notice:

- When ordering pre-painted "Wakefield Bridge" Steel Shingles, it is always preferable to order all items of the same colour at the same time to avoid slight colour differences between batches.
- The material should be checked against the shipping list as soon as it is received.

Any damage or shortage of material on the bill of lading should be noted and reported to the driver or to our offices immediately.

- Do not use pressure treated lumber in direct contact with the "Wakefield Bridge".

# Direction of Application

The "Wakefield Bridge" Steel Shingles must be installed from left to right. We recommend (for aesthetic reasons only), to start with a full panel on the first row, 2/3 and 1/3 of panel to start the second and third row. Repeat the steps for the remainder of the roof section.

# Installation Details Overview

# Eave & Gable Details

## 1 EAVE DETAIL

## 2 GABLE END DETAIL (first and last panel)

### OPTION:

- THE #916 "J" TRIM IS AVAILABLE FOR THE ROOFER WHO WISHES TO INSTALL THE WAKEFIELD BRIDGE SHINGLES WITHOUT HAVING THE NEED TO FOLD THE STEEL SHINGLES ALONG THE GABLE'S STARTER TRIM.
- MAKE SURE TO COMPLETELY FILL THE #916 "J" TRIM WITH BUTYL CAULKING IN ORDER TO AVOID THE POSSIBILITY OF HAVING THE "J" TRIM OPENING UP DUE TO SNOW & ICE.
- DO NOT USE THE #916 "J" TRIM ON A GABLE END IF SNOW & ICE SLIDES DOWN A VALLEY DIRECTLY INTO THE GABLE END. THIS WILL MOST LIKELY RESULT IN THE "J" TRIM OPENING UP.
- DO NOT USE THE #916 "J" TRIM IN VALLEYS.

## PLUMBING VENT DETAIL

-ONCE THE STEEL SHINGLES ARE INSTALLED, CUT THE "DEKTITE" TO THE APPROPRIATE DIAMETER, AND SLIDE OVER PIPE. SECURE THE DEKTITE'S BASE WITH A SEALANT (BETWEEN THE BASE AND ROOFING) THEN FASTEN.

9.2

## HYDRO MAST DETAIL

-ONCE THE STEEL SHINGLES ARE INSTALLED, CUT THE "RETROFIT DEKTITE" TO THE APPROPRIATE DIAMETER AND INSTALL AROUND THE HYDRO MAST. CLAMP THE FLASHING TOGETHER AND SECURE THE BASE WITH A SEALANT (BETWEEN THE BASE AND ROOFING) THEN FASTEN.

# Appendix A: Roof Bracket

## APPENDIX "A" Roof Bracket

### **IMPORTANT**

SEE ROOF BRACKET INSTRUCTIONS FROM THE MANUFACTURER FOR PROPER USE AND MOUNTING INSTRUCTIONS REQUIRED

THE FOLLOWING INSTRUCTIONS DESCRIBE THE INSTALLATION SEQUENCE:

- 1: INSTALL BOTTOM OF SHINGLE
- 2: MOUNT ROOF BRACKET OVER TOP OF SHINGLE (SEE DIAGRAM)
- 3: REMOVE ROOF BRACKET WHEN DONE INSTALLING TOP SHINGLES
- 4: AFTER REMOVING THE ROOF BRACKET, RAISE THE BOTTOM EDGE OF THE TOP SHINGLE WITH A CLAW HAMMER ON EACH SIDE OF TAB WHEN FOLDING TAB BACK IN BY HAND. DO FINAL TUCK WITH A NARROW NON-MARRING TOOL.

**NOTE:** ROOF BRACKETS ARE AVAILABLE IN BUILDING MATERIALS RETAILERS.
